Data Management Best Practices and Lessons Learned – Facilitated Workshop

CLTC offers a Facilitated Workshop that will enable your organization to make firm and effective decisions about the best data management strategies for your geotechnical data. Workshop facilitators bring extensive global experience with data management at independents, majors, and national oil companies. The target participants are geotechnical end-users, data management professionals, and IT staff. The workshop employs customized information gathering techniques, industry standard metrics, trademarked analysis methods, and proven data sorting methodologies.

Deliverables from the workshop can include:

- *Documented dataflows for preselected data streams and types*
- *Placement of the organization on the industry standard Data Management Maturity Model*
- *Analysis of the financial impact of key data management challenges*
- *Computation of a complexity metric to track your organization's progress*
- *Identification of critical bottlenecks in your current data flows*
- *Selection of data quality dimensions relevant to data types*
- *Recommendations for "quick win" projects to increase efficiency*
- *Analysis of the change trajectory of your relationship with technology providers*

This is not just another class where participants will learn what is "wrong" with their data, or a presentation covering the same things that the industry has been saying about data management for decades. This is a participatory exercise to enable your organization to select and solve some key data management problems that are impacting your bottom line today. As you already know, data management is hard work, requires people and processes as well as technology, and isn't glamorous, but it HAS to be done. Let us help you get started!

Our workshop facilitators are licensed and professional geoscientists, and registered Project Management Practitioners with hands-on success in information technologies. The workshop can be conducted on or offsite, and tailored to your timeframe and number of participants.

Contact CLTC for a proposal for your organization.
